DETAILED ACTION

Claims 1-20 are pending in the application and are currently under prosecution.

Please Note: In an effort to enhance communication with our customers and reduce processing time, Group 1640 is running a Fax Response Pilot for Written Restriction Requirements. A dedicated Fax machine is in place to receive your responses. The Fax number is 703-308-4315. A Fax cover sheet is attached to this Office Action for your convenience. We encourage your participation in this Pilot program. If you have any questions or suggestions please contact Anthony Caputa, Ph.D., Supervisory Patent Examiner at 703-308-3995. Thank you in advance for allowing us to enhance our customer service. Please limit the use of this dedicated Fax number to responses to Written Restrictions.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 5-12 drawn to a method of inducing angiogenesis comprising administering an effective amount of a morphogenic protein, classified in class 514, subclass 2.
- II. Claims 2-20 drawn to a method of improving the angiogenic inductive activity of a monomeric morphogenic protein by co-administering a protein stimulatory factor to a vascular tissue defect, classified in class 514, subclass 2 and class 424, subclass 198.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-II are materially distinct methods which differ at least in objectives, method steps, reagents and/or dosages and/or schedules used, response variables, and criteria for success.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because these inventions are distinct for the reasons given above and the search required for one group is not required for another group, restriction for examination purposes as indicated is proper.

Species Election

Groups I and II are generic to a plurality of disclosed patentably distinct species comprising the following morphogenic proteins:

- a) osteogenic protein (Claim 5)
- b) BMP's, COP's, etc. (Claim 6)
- c) OP-1, BMP's, GDF's, etc. (Claim 8- as drawn to monomeric species)
- d) OP-1, BMP's, GDF's, etc. (Claim 10- as drawn to dimeric species)
- e) OP-1 (Claim 11)

The products of the above species represent separate and distinct molecules with different structures and functions such that one species could not be interchanged with the other. As such,

Art Unit: 1642

each species would require different searches and the consideration of different patentability issues.

Group II is further generic to a plurality of disclosed patentably distinct species comprising protein stimulatory factors:

- a) aFGF, bFGF, TFG- β , etc.. (Claim 13)
- b) bFGF or TFG- β -1 (Claim 14)
- c) bFGF (Claim 15)
- d) TFG- β -1 (Claim 16)

The products of the above species represent separate and distinct molecules with different structures and functions such that one species could not be interchanged with the other. As such, each species would require different searches and the consideration of different patentability issues.

Group II is further generic to a plurality of disclosed patentably distinct species comprising modes of administration:

- a) morphogenic protein and stimulatory factor are administered simultaneously (Claim 17)
- b) morphogenic protein and stimulatory factor are administered separately (Claim 18)

Art Unit: 1642

The steps and of the above species are completely distinct and impart different biological functions and uses such that one species could not be interchanged with the other. As such, each species would require different searches and the consideration of different patentability issues.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1642

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
